

CYBER SECURITY

7- Month Course Plan

BEGINNER TO JOB-READY CYBER SECURITY

Launch Your Carrer With VORMIREX

Cyber Security – Week-wise Training Plan (7 Months)

Duration: 28 Weeks (4 weeks per month)

FOUNDATION LEVEL (Weeks 1–8)

Month 1: Cyber Security & Networking Basics

Week 1: Introduction to Cyber Security

- What is Cyber Security?
- Importance of Cyber Security
- Types of cyber threats
- Attack surfaces
- Cyber Security domains & roles
- Industry overview

Outcome: Awareness of cyber risks & career scope

Week 2: Networking Fundamentals

- Basics of computer networks
- Network types (LAN, WAN, MAN)
- OSI model (7 layers)

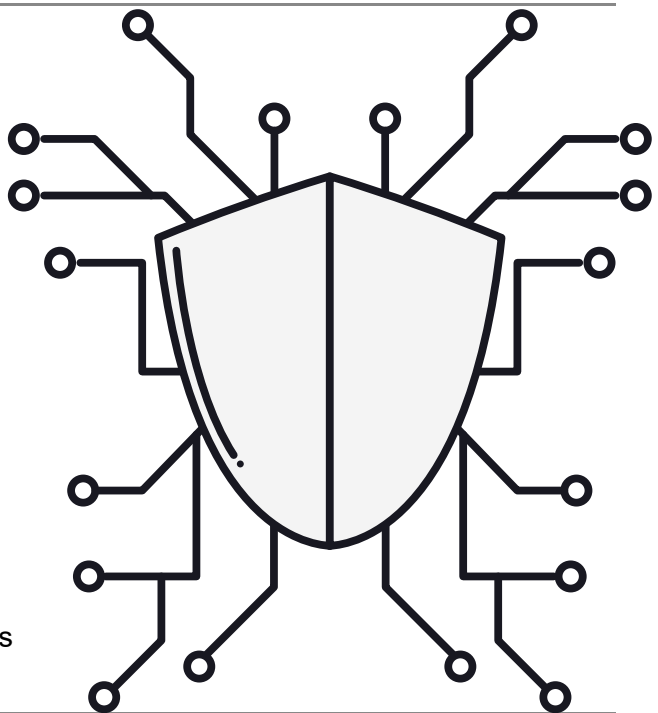

- TCP/IP model
- Data transmission concepts

Outcome: Understanding network communication

Week 3: IP Addressing & Protocols

- IPv4 & IPv6
- Subnetting basics
- DNS & DHCP
- Common ports
- Protocols: HTTP, HTTPS, FTP, SMTP

Outcome: Ability to analyze basic network setups

Week 4: Network Security Basics

- Firewalls (types & working)
- VPN concepts
- Network security best practices
- Introduction to Network monitoring
- Cyber Security career paths

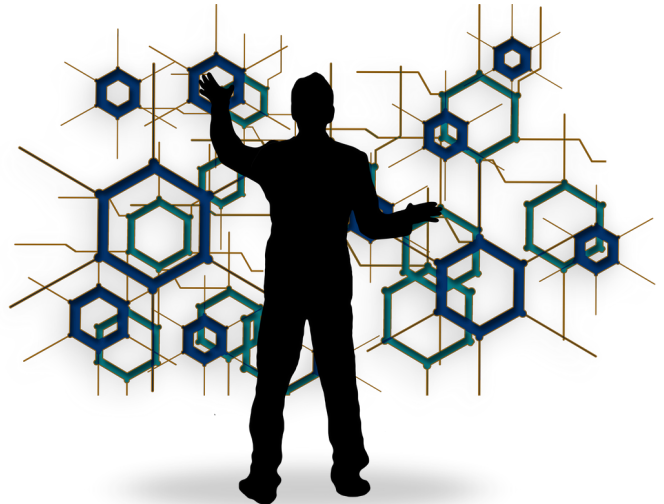

Outcome: Network security fundamentals

Month 2: Operating Systems & Security Fundamentals

Week 5: Windows Security

- Windows OS architecture
- User accounts & permissions
- NTFS permissions
- Windows Firewall
- Basic security settings

Outcome: Secure Windows environments

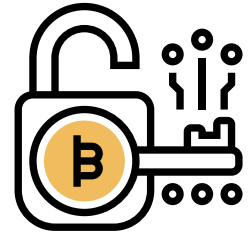

Week 6: Linux Fundamentals for Security

- Linux architecture
- Basic Linux commands
- File & directory permissions
- Users & groups
- Linux security basics

Outcome: Linux usage for security operations

Week 7: System Hardening & Authentication

- System hardening techniques
- Access control models
- Password policies
- Multi-Factor Authentication (MFA)
- Authentication vs Authorization

Outcome: Harden systems against attacks

Week 8: Cryptography & Security Best Practices

- Cryptography basics
- Symmetric & asymmetric encryption
- Hashing concepts
- Digital certificates
- Security best practices

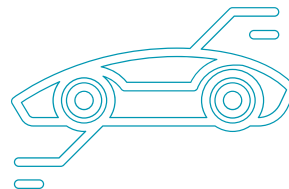

Outcome: Secure data & credentials

ADVANCED LEVEL (Weeks 9–28)

Month 3: Cyber Threats, Attacks & Defense

Week 9: Malware & Threat Landscape

- Types of malware

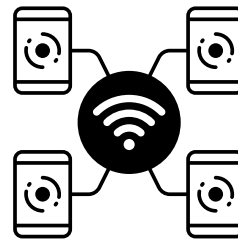

- Malware infection methods
- Basic malware analysis
- Threat actors

Outcome: Identify malicious behavior

Week 10: Social Engineering & Network Attacks

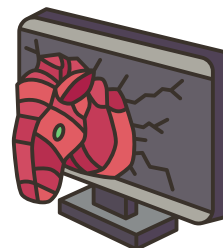

- Phishing attacks
- Email spoofing
- Social engineering techniques
- Man-in-the-Middle attacks

Outcome: Recognize human-based attacks

Week 11: DoS, DDoS & Vulnerability Assessment

- DoS & DDoS attacks
- Attack tools overview
- Vulnerability assessment concepts
- Vulnerability scanning tools

Outcome: Assess system weaknesses

Week 12: Security Monitoring & Threat Intelligence

- Security monitoring basics
- Logs & alerts
- Threat intelligence concepts
- Incident detection basics

Outcome: Monitor & detect attacks

Month 4: Web & Network Security

Week 13: Web Application Fundamentals

- Web architecture
- Client-server model
- HTTP request/response
- Web servers & databases

Outcome: Understand web attack surfaces

Week 14: OWASP Top 10

- OWASP overview
- SQL Injection
- XSS

- Security misconfigurations

Outcome: Identify common web vulnerabilities

Week 15: Advanced Web Attacks

- CSRF attacks
- Authentication flaws
- Session hijacking
- Secure coding basics

Outcome: Secure web applications

Week 16: Network & Wireless Security

- Network security tools
- IDS & IPS
- Wi-Fi security
- Wireless attacks
- Traffic analysis

Outcome: Secure enterprise networks

Month 5: Ethical Hacking & Penetration Testing

Week 17: Ethical Hacking Methodology

- Ethical hacking lifecycle
- Legal & ethical guidelines
- Lab setup
- Reconnaissance techniques

Outcome: Structured hacking approach

Week 18: Scanning & Enumeration

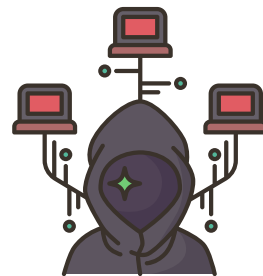

- Network scanning
- Service enumeration
- Vulnerability discovery
- Tool usage (Nmap etc.)

Outcome: Identify target systems

Week 19: Exploitation & Password Attacks

- Exploitation basics
- Password cracking methods
- Brute-force & dictionary attacks
- Defense strategies

Outcome: Attack & defense knowledge

Week 20: Post-Exploitation & Reporting

- Privilege escalation concepts
- Maintaining access
- Clearing tracks
- Penetration testing reports

Outcome: Professional pentest skills

Month 6: Cloud, IoT & Advanced Security

Week 21: Cloud Computing & Security

- Cloud service models
- Shared responsibility model
- Cloud security risks
- Cloud security controls

Outcome: Secure cloud environments

Week 22: AWS / Azure Security Basics

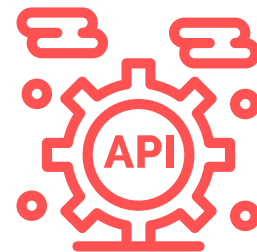

- IAM concepts

- Cloud access control
- Storage security
- Monitoring & logging

Outcome: Cloud security implementation

Week 23: API, IoT & Container Security

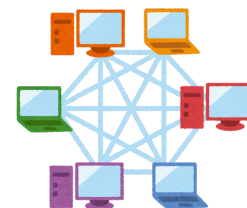

- API security risks
- IoT vulnerabilities
- Container security basics
- DevSecOps overview

Outcome: Secure modern technologies

Week 24: Zero Trust & Advanced Models

- Zero Trust architecture
- Network segmentation
- Identity-based security
- Modern enterprise security

Outcome: Enterprise-grade security understanding

Month 7: Incident Response, Forensics & Career

Week 25: Incident Response

- Incident response lifecycle
- Detection & analysis
- Containment & recovery
- Case studies

Outcome: Respond to security incidents

Week 26: Digital Forensics & SIEM

- Digital forensics basics
- Evidence collection
- Log analysis
- SIEM tools basics

Outcome: Investigate cyber incidents

Week 27: Cyber Laws & Risk Management

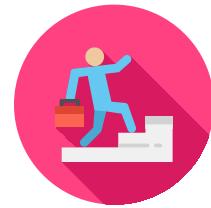

- Data protection laws
- Cyber laws (global overview)
- Risk assessment

- Compliance frameworks

Outcome: Legal & governance awareness

Week 28: Capstone Project & Career Prep

- Real-world capstone project
- Resume building
- Interview preparation
- Certification roadmap (CEH, Security+, CISSP)

Outcome: Job-ready Cyber Security professional
